What happens in our brains to make us feel fear, love, hate, anger, or joy? Do we control our emotions, or do our emotions control us? Do animals have emotions? In *The Emotional Brain*, Joseph LeDoux investigates the origins of human emotions and explains that many exist as part of complex neural systems that evolved to enable us to survive.

Unlike conscious feelings, emotions originate at a much deeper level in the brain, says LeDoux, a leading authority in the field of neural science. In this provocative book, LeDoux explores the brain mechanisms underlying our emotions.

Conscious feelings, says LeDoux, are somewhat irrelevant to the way the emotional brain works. He points out that emotional responses are hard-wired to the brain's circuitry, but the things that make us emotional are learned through experience. And this may be the key to understanding, and even changing, our emotional makeup. Many common psychiatric problems—such as phobias or post-traumatic stress disorder—involve malfunctions in the way emotional systems learn and remember. Understanding how these mechanisms normally work will have important consequences for how we view ourselves and how we treat emotional disorders.

**Why should we be skeptical of
4 out of 5 dentists surveyed?**

What's the bull behind the bull market?

**Do statistics really prove it's safer
to fly than drive across country?**

Find out in this delightfully witty excursion into the world of mathematical manipulation, as popular columnist and math whiz A. K. Dewdney unveils the vast array of ways in which numbers are twisted and statistics are turned in order to fool the unsuspecting public. From the case of the "Incredible Expanding Toyota" to that of the "National Security Googol," Dewdney exposes the slick tricks and subtle schemes used by advertisers, politicians, special interest lobbyists, stockbrokers, car dealers, and just about anybody who tries to impress us with numbers, charts, and graphs.

Two Hundred Percent of Nothing is packed with real-life examples that demonstrate all types of math abuses. Dewdney identifies them by name, from "number bludgeoning" to "occult sampling," and shows us exactly how they play upon our innumeracy — the common inability to understand the rules of percentages, ratios, statistics, and basic math logic. Furthermore, he explains the basic math behind the answers so that the next time you see mathematical chicanery, you'll recognize it.

Though you may be shocked at how pervasive math abuse is, you may be even more astonished to discover how rapidly you can learn the simple tricks and basic logic of defending yourself against it.
