In **ROGUE ASTEROIDS AND DOOMSDAY COMETS**, Duncan Steel tells the intriguing story of the scientific detective work that pieced together evidence uncovering a stunning history of asteroid impacts. Recent advances in telescope tracking technology show at least 2,000 objects now orbiting Earth that are large enough to hit with the force of a nuclear weapon.

Steel explains the plans researchers have proposed to search for and destroy incoming celestial bodies, including Edward Teller's call for a nuclear bomb. —from John Wiley & Sons

John Wiley & Sons, 1995, 308 pages, 6 1/4" x 9 1/2", hardcover, \$24.95

OUR DREAMING MIND delves into the most provocative experiments that scientists are conducting on the dreaming mind in this century. Van de Castle recreates the excitement surrounding the discovery of REM (rapid eye movement) sleep and surveys the major areas of dream experimentation, including studies of dreams and sexual arousal, the impact of pregnancy on dreams, the connection between dreams and creativity, and the possibility of paranormal dreams. He begins with a richly detailed discussion of the importance of dreams in ancient civilizations.

THE RAMMED EARTH HOUSE shows how builders can create structures that combine pleasing aesthetics and intense practicality with a powerful sense of place. Rammed earth houses are built entirely on site, using basic elements—earth, water, and a little cement. The solid masonry walls permit design flexibility while providing year-round comfort and minimal use of energy.

—from Chelsea Green

OUR MOLECULAR NATURE is a richly illustrated introduction to the extraordinary world of the molecules that are responsible for life. David Goodsell examines molecules ranging from those that give cells their shape to those responsible for the immune system, digestion, and thought.

Goodsell guides the reader through such discoveries as why cyanide poisons kill so quickly and what single enzyme makes some people lactose-intolerant. This is a remarkable journey through a world both familiar and mysterious—our own bodies.

Armed with formidable technological advances and an interdisciplinary team approach, archaeologists are re-creating the age-old stories of lost human worlds.

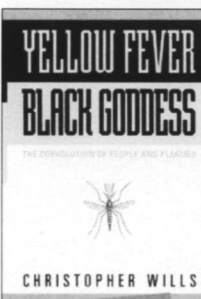

In **TIME DETECTIVES**, Brian Fagan takes readers around the world and through more than 15,000 years of human history, to the sites of some of the most breathtaking and significant finds of recent years. He details:

- How examination of the site of a bison hunt shed light on the life of the Plains Indians
- What the excavation of the earliest Bronze Age shipwreck taught scientists and historians about trade in the eastern Mediterranean

YELLOW FEVER, BLACK GODDESS focuses on the protozoa, bacteria, and viruses that cause such diseases as yellow fever and cholera.

Such organisms lead complex lives of their own, but the interaction of microbes and humans over time has done much to shape both species. The genetic diversity that makes each of us unique also protects us from infection. In a reciprocal relationship, our responses to disease affect the ways in which the pathogens themselves evolve. Christopher Wills points the way toward understanding the entire evolutionary environment in which microbes function—from tropical breeding grounds to resistant temperate zones, from insect viruses to human plagues.
