A Straightforward Look at Depression and the Controversial New Drugs for Treating It

Much has been written and debated about Prozac and the other new antidepressants—Zoloft, Paxil, Wellbutrin, Effexor, Luvox—but most of this information focuses on the ethical and social implications of the drugs, not on the practical information most people need. In this sensible and user-friendly guide, Harvard Medical School professor William Appleton answers all the questions you may have about these drugs, including:

- ❖ How do I know if I need to take an antidepressant?
- ❖ What are the side effects of the different antidepressants?
- ❖ Will I lose the essence of my personality?
- ❖ If they work, will I have to take drugs my whole life?
- ❖ Which antidepressant is right for me?
- ❖ What do I do if none of the drugs can help me? — from Plume

"Much wise advice, to both patients and their helpers, from a broadly experienced, honest, and modest clinician."
