Scientific discoveries are constantly in the news. Almost daily we hear about new and important breakthroughs. But sometimes it turns out that what was trumpeted as scientific truth is later discredited.

In **AT THE FRINGES OF SCIENCE**, Michael Friedlander reviews the conventional scientific method and shows how scientists examine the hard cases to determine what is science and what is pseudoscience.

He leads the reader through case after entertaining case, covering favorites of "tabloid science" such as astrology and UFOs, scientific controversies such as cold fusion, and maverick ideas that were at first rejected, only to be embraced later.

Westview Press, 1995, 196 pages, 6 1/4" x 9 1/4", hardcover, ~~\$24.95~~ **FringesSciH**

MOUNTAINS is a comprehensive look at the grandeur of mountains and a call by 16 renowned experts to preserve them. Learn how mountains, from the snow-covered Alps to those in the tropics, are formed as a result of volcanoes or shifting continental plates; how unique flora and fauna (including exotic plants and a magnificent array of animal species) have adapted to mountain habitats; and what impact humans have had on mountains.

Rodale Press, 1994, 160 pages, 9 1/4" x 12 1/4", hardcover
