The Weekly Newsmagazine of Science

Science Service Publication
Volume 152, No.17, October 25, 1997

Thomas Peter Bennett	Publisher
Julie Ann Miller	Editor
Blair Burns Potter	Managing Editor
Dan Skripkar	Production/Design Director
David Lindley	Associate Editor
Janet Raloff	Senior Editor
Ivars Peterson	Environment/Policy Online Editor
Bruce Bower	Mathematics/Physics
Richard Monastersky	Behavioral Sciences
Kathleen Fackelmann, Nathan Seppa	Internship Coordinator
Ron Cowen	Earth Science
Christine Mlot	Biomedicine
John Travis	Astronomy
Corinna Wu	Life Sciences
Sid Perkins	Biology
Meghan Mitchell	Chemistry/Materials Science
Gwendolyn Gillespie	Science Writer Intern
Cait Anthony	Editorial Assistant
Donald R. Harless	Editorial Secretary
	Books/Advertising
	Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$49.50 for 1 year or \$88.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, 1719 N Street, N.W., Washington, D.C. 20036. Preferred Periodicals postage paid at Washington, D.C., and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, Ohio 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided. Copyright © 1997 by Science Service. Title registered as trademark U.S. and Canadian Patent Offices. Printed in U.S.A. Republication of any portion of SCIENCE NEWS without written permission of the publisher is prohibited. This Week

- 260 Population Diversity Crowds the Ark
- 260 High cholesterol may benefit elderly
- 261 Kids with schizophrenia yield brain clues
- 261 Immersion for analyzing complex software
- 262 Antarctic ozone hole expands in altitude
- 262 Enzyme mechanics win chemistry Nobel
- 263 High-dose rotavirus vaccine protects kids
- 263 Laser cooling yields Nobel in physics

Research Notes

- 264 Astronomy
- 264 Behavior
- 270 Chemistry

Articles

- 266 Must We Pull the Plug?
- 268 Spying on El Niño

Cover: Abnormally warm waters, known as El Niño, have spread across much of the equatorial Pacific Ocean this summer, heralding unusual weather around the world. In this image, taken by the TOPEX/Poseidon satellite, El Niño shows up as the long white blob, which depicts warm water sitting 14 to 32 centimeters higher than the normal sea level. (Image: NASA/Jet Propulsion Laboratory)

Departments

- 259 Letters
- 271 Books

SCIENCE NEWS is published by Science Service, a nonprofit corporation founded in 1921. The mission of Science Service is to advance the understanding and appreciation of science through publications and educational programs.

Board of Trustees — *Chairman*, Dudley Herschbach; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; *Joseph W. Berg Jr.*; *Robert W. Fri*; *J. David Hann*; *Shirley M. Malcom*; *Eve L. Menger*; *C. Bradley Moore*; *Ben Patrusky*; *H. Guyford Stever*; *Sanford J. Ungar*; *Deborah P. Wolfe*; *Chairman Emeritus*, Glenn T. Seaborg; *Honorary Trustees*, Edward Bliss Jr.; *Bowen C. Dees*; *Elena O. Nightingale*; *John Troan*.

Officers—*President*, Thomas Peter Bennett; *Vice President and Business Manager*, Donald R. Hartless.

Letters

No-hands drivers hand over control

The real problem with the automated highway concept is not "convincing lawmakers and the public that it will work reliably and safely" ("Look, Ma, No Hands!" SN: 9/13/97, p. 168), it is that few, if any, people will travel an automated highway by choice. The feeling of control and empowerment that comes with driving a vehicle is the main reason our ancestors abandoned passenger railroads for highway travel. On an automated highway, the driver becomes a passenger.

If the federal government were really interested in spending money appropriately on transportation, it would repair the existing interstate highways, promote improved driver education, and expand passenger railroad

service for those few people who want to get from point A to point B without driving.

*Charles Masi
Bullhead City, Ariz.*

Cars that drive themselves down the highway would be nice. Cars that drive themselves home at 2 a.m. with their drunk owner in the back seat would probably save more lives, though.

*Alden Wilner
Wichita, Kan.*

Timing mammography

Some mammography centers have long advised women to schedule their visits shortly after their periods, that is, early in their menstrual cycle. The breast is usually less tender then and better able to tolerate the compression needed for a good mammogram.

If mammograms are really more accurate at that time, what a happy coincidence ("Mammograms better when timed to cycles," SN: 8/30/97, p. 134). Or maybe the difference in tenderness explains the difference in accuracy—especially since the most tender women often seem to be the ones with the densest

breast tissue on the image, and false negative mammograms are probably more common in such women.

*Michael Lenker
Mecklenburg Radiology Associates
Charlotte, N.C.*

Hypothesis has no room for belief

There is no room in a scientific magazine for comments like Robert Conway's response to the conclusion of Louis Frank that atmospheric water is collecting from comets ("Reservoir of water hides high above Earth," SN: 8/23/97, p. 117).

We have proof of numerous incoming water-bearing comets and proof of high water vapor concentrations in the upper atmosphere. Conway admits these facts, then betrays his profession with ". . . I can't believe that [Frank's] explanation is the right answer." Who cares what Conway believes unless he can propose a reasonable alternative?

This kind of thinking is a disservice to the ideals of scientific inquiry.

*Dana Thibault
Denver, Colo.*
