

Science Service Publication
Volume 152, No. 24, December 13, 1997

Thomas Peter Bennett	Publisher
Julie Ann Miller	Editor
Blair Burns Potter	Managing Editor
Dan Skripkar	Production/Design Director
David Lindley	Associate Editor
Janet Raloff	Senior Editor
Ivars Peterson	Environment/Policy Online Editor
Bruce Bower	Mathematics/Physics
Richard Monastersky	Behavioral Sciences
Kathleen Fackelmann,	Internship Coordinator
Nathan Seppa	Earth Science
Ron Cowen	Biomedicine
Christine Mlot	Astronomy
John Travis	Life Sciences
Corinna Wu	Biology
Sid Perkins	Chemistry/
Meghan Mitchell	Materials Science
Gwendolyn Gillespie	Science Writer Intern
Cait Anthony	Editorial Assistant
Donald R. Harless	Editorial Secretary
	Books/Advertising
	Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$49.50 for 1 year or \$88.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, 1719 N Street, N.W., Washington, D.C. 20036. Preferred Periodicals postage paid at Washington, D.C., and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, Ohio 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided. Copyright © 1997 by Science Service. This Week

- 372 Chicken Flu Virus Raises Concerns
- 372 Physical ills follow trauma response
- 373 All eyes on Eta Carinae: A new spectacle?
- 373 California shakes most often in September
- 374 Hunt for a botanical gene for all diseases
- 374 Beatin' those low-life blue-laser blues
- 375 U.S. funding boosts accelerator project
- 375 Butterfly sparkle characterized for chips
- 375 From fleas to brain tumors

Research Notes

- 378 Chemistry
- 379 Earth Science
- 380 Biomedicine
- 380 Materials Science

Articles

- 376 When Tomatoes See Red
- 382 Psst... Wanna Buy a *T. rex*?

Cover: The *Tyrannosaurus rex* specimen known as Sue fetched a price of \$8.36 million at auction in October. The largest and most complete skeleton of this species ever found, Sue had a 5-foot-long skull bearing serrated teeth. Some paleontologists contend that the sale will harm their endeavors. Departments

- 371 Letters
- 381 Books

SCIENCE NEWS is published by Science Service, a nonprofit corporation founded in 1921. The mission of Science Service is to advance the understanding and appreciation of science through publications and educational programs.

Board of Trustees — *Chairman*, Dudley Herschbach; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Robert W. Fri; Samuel Gubins; J. David Hann; Shirley M. Malcom; Eve L. Menger; C. Bradley Moore; Ben Patrusky; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe; *Chairman Emeritus*, Glenn T. Seaborg; *Honorary Trustees*, Edward Bliss Jr.; Bowen C. Dees; Elena O. Nightingale; John Troan.

Officers—*President*, Thomas Peter Bennett; *Vice President and Business Manager*, Donald R. Harless.

Letters

Other routes to improving the census

Regarding "Sampling and the Census" (SN: 10/11/97, p. 238): I propose that threatening to cut off future mail delivery to people who do not return census forms would enhance the return of those forms. Actually, the cost would not be as great as that of some of the other corrective measures being considered.

A boldly printed message on the envelope would advise addressees of the threat, and postal workers could check off compliance or a justifiable reason for noncompliance on a form easily transmitted to the Census Bureau. Also, noncompliance could be measured and possibly corrected for in some way.

William C. Rose
Crystal, Minn.

If the Census Bureau simply counted people instead of becoming intrusive and offensive in the quest for information irrelevant to its Constitutional mandate, returns would

improve greatly. I've spoken to many people about this, and the feeling is quite prevalent that most of the questions asked are none of the government's business. The arrogance and intrusiveness of the census takers alienates people who would otherwise cooperate in answering a simple head count or citizenship question.

Fix this problem and the count will improve.

V.E. Henley
Morgan Hill, Calif.

Use 'obese' with caution

I hope Velimir Matkovic was speaking with his tongue firmly in his cheek, because he appeared to be saying that anyone who is not unusually skinny or a fitness fanatic is obese ("Leptin linked to onset of monthly cycles," SN: 10/18/97, p. 247).

This is the sort of thinking that sends teenage girls to the toilet to stick their fingers down their throats.

Daniel J. Berger
Bluffton, Ohio

Safety of ultrasound

When I read "Bursting bubbles break chemical bonds" (SN: 10/11/97, p. 228), this sentence jumped out at me: "Cavitation also occurs when ultrasound waves pass through liquids, producing bubbles that grow rapidly and then collapse in a flash of light."

Millions of pregnant women receive ultrasound as a normal part of keeping tabs on their pregnancies. If this is not "ultrasound passing through liquid," I don't know what is. Is there any research on this?

Jim Richings
Maydelle, Texas

A very good question! Only low-intensity ultrasound waves are used to image fetuses in the womb, so the procedure is safe. The waves that produce violently collapsing bubbles have a much higher intensity.

Actually, several groups are looking at high-intensity ultrasound to treat ailments such as kidney stones or to perform surgery without a scalpel.

—C. Wu
