The Mathematics Calendar 1998

1998 Mathematics Calendars

By Theoni Pappas

Unlock a fascinating world of mathematical challenges and learning with these popular calendars. Both 12-month wall calendars are all-new editions featuring math problems for every day of the year; in each case, the solution is the date. An informative essay, mathematical curiosity, or intriguing problem—plus a handsome graphic—accompanies each month. Problems cover the spectrum from basic arithmetic to calculus. The challenge is discovering how to arrive at the solution and

possibly uncovering more than one method of solving it.

In **The Mathematics Calendar 1998** you can discover mathematics in nature, music, art, and even unlawful acts. A mathematical look at the art of Claude Monet and insight into crime are intriguing additions to this year's version. Games, such as ancient Latrunculi, and brain teasers are here, too! There is a math problem for every day of the year, whose solution is the date. The problems range in difficulty from arithmetic to calculus. 12" x 18", \$9.95

The problems and text in **The Children's Mathematics Calendar 1998** help to develop skills, introduce new concepts, stimulate curiosity, and present challenges. In addition, this calendar offers a unique opportunity for young people to work with each other, their parents, and their teachers in determining how the solution to each problem is reached. Featured topics of this edition include tessellations, mazes, spirals, and the history of the cuneiform. (Children's) Wide World Tetra, 11" x 17", \$9.95. Recommended for ages 6–12.
