# Tomorrow's great discoveries will be made by the students we discover today.

Beginning with the invention of the microprocessor, Intel has been responsible for some of the most exciting and impactful technological advances of the last 25 years. At Intel we recognize that to produce leading-edge technologies, it is essential to support a rich educational environment that will inspire future researchers and innovators. That's why Intel supports the efforts of Science Service, a non-profit organization dedicated to advancing the understanding and appreciation of science. Jointly, we share a common goal — a commitment to programs that encourage and reward students in their pursuit of science, math and technology education.

The Intel Science Talent Search is the most prestigious search for future scientific leaders among high school seniors. The Science Talent Search has recognized more than 2,200 young scientists and awarded more than $3.7 million in scholarships over the past 57 years. Five former competitors have gone on to win the Nobel Prize.

The Intel ISEF is the world's largest international pre-college science project competition. More than 1,200 student finalists from science fairs around the world compete in the Intel ISEF for more than $2 million in awards and scholarships. 1999 marks the 50th anniversary of the fair.
