Mathematics

by Theoni Pappas

Unlock a fascinating world of mathematical challenges and knowledge with these popular calendars. Both 12-month wall calendars are all-new editions featuring math problems for every day of the year. The solution is always the date. An informative essay, a mathematical curiosity, or an intriguing problem—plus a handsome graphic—accompanies each month. Problems cover the spectrum from basic arithmetic to calculus. The answer is only one small part in the process of solving a problem. The challenge is discovering how to arrive at the solution and possibly discovering more than one method of solving it.

In its 22nd year, this calendar still gets better each edition. The **Mathematics Calendar 2000** is loaded with challenging puzzles and problems and short essays on the ways in which math integrates other fields. Among this year's featured monthly topics are nanotechnology, the artwork of Tony Robbin, the ancient board game Senat, and methods for calculating population. To solve the daily problems, you'll need tools ranging from arithmetic to calculus.

Wide World Publishing/Tetra, 1999, 12" x 18", \$9.95.

The Children's Mathematics Calendar makes math come alive with characters and ideas in the stories and concepts presented each month. Problems and text vary in difficulty. They will develop skills, stimulate curiosity, and present challenges for students in grades 1 through 8. In addition to stimulating a young person's thinking, this calendar offers a unique opportunity for young people to work with each other, their parents, and their teachers in determining how the solution to each problem is reached. This year's featured topics include Napier rods, quadrilaterals, and shapes in nature.
