

Dam Will Harm Wildlife

➤ CESSATION of plans for the huge Rampart Dam proposed for the Yukon River in central Alaska, was urged by a six-man team commissioned by the Natural Resources Council of America.

The project would be costly, could prove ineffectual when completed about 30 years from now, and would bring overwhelming losses of fish and wildlife—more than from any other single water development project in the history of North America, said Dr. Stephen H. Spurr of the University of Michigan and head of the study team.

The Rampart Dam is the most expensive gamble ever suggested in hydroelectric development, he told members of the 31st North American Wildlife and Natural Resources Conference. It is highly probable that toward the end of the century when Rampart power could be available, it would not be able to compete with nuclear power of the lower 48 states. Building a nuclear plant on the Pacific Coast would be cheaper, he said.

The Rampart Dam has been proposed as a means of luring electro-process industries, and hence people with their towns and cities, into central Alaska in an effort to populate that vast country. The study team refuted this point by arguing that the proposal is based on the unfounded assumption that there are minerals in sufficient quantity and quality to attract such industries.

The huge lake behind the proposed dam would flood eight million acres or more, and take up to 30 years to fill. The lake, 80 miles across at its widest point and 280 miles long, would flood 400 miles of the Yukon River and 12,600 miles of tributaries. This flooding would destroy the breeding grounds of migratory ducks and other

waterfowl and would negate 30 years' endeavor in waterfowl preservation in North America. The habitats of wildlife would be destroyed, as well as vast areas of forest and other undeveloped land.

The dam would block the yearly run of profitable fish, including the chinook, chum and coho salmon, and the catch of commercial and other fisheries would be reduced by one-quarter to one-half.

The team, which spent 16 months on the study, recommended that extra high voltage federal transmission lines be built to link the Kenai Peninsula through Anchorage and Fairbanks. This is in the "railbelt area" associated with the Alaska Railway where 60% of the state's population resides. The line could make low-cost power available almost immediately to most Alaskans.

In its far-ranging report, "Rampart Dam and the Economic Development of Alaska," the team analyzed Alaska's future population, electric power demands, generation facilities and needs, sources of energy, transmission needs and probable power sources.

HYDROLOGY

Instant Information On Water Needed

➤ SATELLITES and computers might provide almost instantaneous information of how fast the Mississippi River is flowing, how much snow is falling on Mt. Everest, or how much water there is in Lahore, India.

The idea of a quick system for acquiring and disbursing information of worldwide water conditions was discussed at a meeting of the Scientific Committee on Water Research of the International Council of Scientific Unions. The proposal was presented by Dr. Paul Bock, member of the U.S. National Committee for the International Hydrological Decade, sponsored by UNESCO.

Water data about precipitation, river stages, flow rates, groundwater levels, soil moisture, snow cover, temperatures, lake levels and salt content of estuaries could be recorded daily or more often by a network of stations placed throughout the world, Dr. Bock said. These data would be sent by way of satellites or fast conventional communication systems to central computers where they would be analyzed and then sent to agencies all over the world.

Such an integrated global system would strengthen the national and international programs set forth by the International Hydrological Decade which opened January 1965.

The fast information system would be particularly valuable to developing countries now severely handicapped by lack of water data.

FIX CLOCKS, WATCHES

FOR FUN & PROFIT

OFTEN AFTER OTHER experts have thrown up their hands in defeat! Fascinating new Handbook by master craftsman H. G. Harris gives you the kind of knowledge skilled watchmakers learn in years of apprenticeship.

OVER 200 ILLUSTRATIONS show how to install hands, dials, crystals, mainsprings, stems . . . rehouse old movements in modern cases . . . speedily cure many troubles by demagnetizing or cleaning.

INSTRUCTIONS COVER every popular watch and clock, chimes, grandfathers, cuckoo, everyday alarm and electric clocks. Handbook tells you where to buy parts . . . where to send "overflow" work for repairs at wholesale prices as business expands! Even how to pick up fine old clocks at rummage prices, then restore for easy, profitable sale!

ONE REPAIR PAYS FOR COMPLETE HANDBOOK! Friends gladly pay \$5 to \$50 for restoring cherished timepieces. But see for yourself! Try the HANDBOOK OF WATCH AND CLOCK REPAIRS seven days! Rush only \$4.95, on money-back guarantee of satisfaction, to:

EMERSON BOOKS, Inc.

Dept. 822-P, 251 W. 19th St., N.Y., N.Y. 10011

LIGHT AND OPTICS LAB

Exciting optical projects for the study of light. Equipment includes: five Precision Lenses, Prism, Polarizing Filters, Diffraction Grating, Mirror, Telescoping Tubing, Lens Mounts, Tube Holders and Brackets. All the parts and instructions to build a Microscope Camera Obscura, Camera Lucida, Polaroscope, and many other optical devices. \$6.95

Do You Know?

The manipulation of blood cholesterol levels through diet is not conclusively accepted by scientists as the best way to prevent or treat cardiovascular diseases.

An electrical digital recorder can be used to check hundreds of individual chicken cages once an hour to determine when each chicken has laid an egg.

Chlorophyll-containing organisms have been found in the sea, living and reproducing at a depth of almost three miles.

Tartar, the primary cause of gum disease, can be restrained by a dentifrice containing urea which restricts its formation.

WFF 'N PROOF

The GAME for THINKERS

Can you solve this problem?

1. There are three numbered statements in this box.
2. Two of these numbered statements are not true.
3. The average increase in I.Q. scores of those who learn to play WFF 'N PROOF is more than 20 points.

Is statement No. 3 true?

A NEW DIMENSION IN EDUCATIONAL GAMES
designed by Yale Professor
Layman
E.
Allen

Box 71-FS
New Haven, Connecticut
Please send me . . . WFF 'N PROOF game/s @ \$6.50 each (including \$5.00 for postage and handling). I enclose \$..... and understand that if I am not completely satisfied, I can return the kit in 10 days for a full refund of the purchase price.
