

In this age of great scientific discoveries and developments, Science Year will help your family understand today's world.

The 1967 edition of Science Year is "Indispensable for libraries," according to *Science Books*, a quarterly review published by the American Association for the Advancement of Science.

Published annually, Science Year is a lavishly illustrated, comprehensive survey of man's adventures in the space, earth and life sciences. The 1967 edition of Science Year presents 15 penetrating special reports, in one of which is reproduced, for the first time in any major publication, a hologram—a fascinating new type of incredibly

realistic, three-dimensional photography.

The Science File section of Science Year provides capsule reports on 45 subjects, arranged alphabetically. The Men of Science section contains illustrated profiles of two scientists of international renown—pediatric heart specialist Helen Taussig, and physicist Abdus Salam.

Written by recognized authorities, under supervision of a distinguished advisory board, Science Year—The World Book Science Annual—makes the year's scientific advances accessible to students and adults.

Price: \$6.95. Order direct from World Book Encyclopedia, Inc., Box 3737, Chicago, Illinois 60654.
