quark-hunters frustrated

It makes your job a little easier and your students a lot brighter.

Our new planetarium is a perfect classroom aid. It lets you demonstrate the workings of the Universe clearly and completely. It's a 3-dimensional scale model showing Earth, the Moon and Sun exactly as they are. Flip a switch and the class can see the Earth rotate and move around the Sun, and the Moon orbit Earth. (A)

You can demonstrate lunar and solar eclipses, Moon phases, the seasons, polar day and night, the morning and evening Sun, constellations during the seasons, the time of year, position of the solar system and location of stars each night of the year. (B)

Students can see inside through a clear Plexiglas® shell. The top removes for closer viewing. (C) Diagrams of 60 constellations are included. You can attach them to the outer shell and project them onto room walls. (D)

The Astronomics-Baader Planetarium helps make a fascinating subject more understandable. And it's portable so you can move it from room to room as needed. The price, only \$295, complete with instructions. Send the coupon for more information.

Thor Heyerdahl and six others are traveling the Atlantic from Morocco to the Yucatan in this papyrus reed craft. They hope to demonstrate that the ancient Egyptians could have drifted to Mexico—hence the cultural parallels. p. 534
