NOVAS DEL MENSE IN INTERLINGUA

Physica Atomic.—In le area de New York le deposition de strontium-90 in le ossos de infantes e juveniles esseva duo vices plus grande in 1958 que in 1957. Le causa de iste augmento particular esseva tests de bombas atomic executate in Russia. Le datos nunc disponibile indica que infantes e juveniles in New York va attinger le etate adulte con ossos que contine un concentration de strontium-90 representante un radioactivitate de circa 5% de illo recipite per nos omnes ab radios cosmic e altere fontes natural.

Energia Atomic.—A parte le facto que le russe rumpe-glacie Lenin es propellite per energia atomic, nihil definitive es cognoscite foras de Russia con respecto a naves a propulsion atomic planate o currentemente tenite in servizio per le marina sovietic. Le Statos Unite ha sex submarinos atomic in servizio e 27 alteres in preparation. Quanto a naves de superficie a propulsion atomic, le marina statounitese ha tres in preparation, incluse un que esseva recentemente lanceate al aqua sed que es non ancora in servizio. Plus importante es le facto que le mense de julio 1959 ha vidite le lanceamento del prime statounitese nave atomic de commercio. Isto es le Savannah. Illo facera 21 nodos e portara 9340 tonnas de cargo e 60 passageros con un equipa de 109 marineros. Su provision de combustibile requirera refaction non plus que omne 100,000 millias nautic. Illo ha un longor in le vicinitate de 200 m. Le estimation de su costo de construction es \$42,500,000. Su prime mission va esser un viage circumglobal de "bon voluntate."

Ressources Alimentari.—Le oceanos es vasto reservoirs de alimentos, sed vasto areas del oceanos es etiam de facto "desertos aquose" que es praticamente dispoviste de vita proque in illos nulle currentes vertical apporta al superficie le minerales necessari pro le existentia e propagation de microorganismos e proque le absentia de microorganismos resulta directe o indirectemente in le impossibilitate del existentia o superviventia de pisces e altere macroorganismos de interesse alimentari potential. Le statounitese Academia National de Scientia ha organise un committee que se occupa del problema de transformar le "desertos oceanic" in areas habitabile per populationes piscari. Un del methodos que es considerate como theoricamente promittente laborarea con explosions atomic que esseva repetite systematicamente in punctos strategic al fundo del oceanos in le expectation que illos iniciare un circulation vertical del aqua.

Criminologia.—Tanto in Russia como etiam in le Statos Unite, specialistas de medicina forense investiga le possibilite de utilisar le "specificitate" del capillo in le identification de criminales. Dr. A. N. Krishnevskij de Moscova ha constatare per exemplo que duo capillos que differe in lor resistencia al traction per 40 g o plus non pote pertinere al mesme subjecto. Il pare que capillos ab differente individuos es ancora plus finmente individualisate con respecto a lor maniera de refringir le lumine. In le Statos Unite ha constatare que le microchimia del capillos permitte lor classification in grupplos que es plus o minus comparabile al ben cognoscite grupplos de sanguine.

Microscopia.—On sape que le potentia separatori de un microscopio non e infinitemente meliorabile sed que illo es limitate per le longor de unda del lumine. Le potentia separatori del microscopio electronic es multo superior a illo del microscopio luminar proque le longor de

unda associate con le electron es multo plus micre que le longor de unda de lumine, sed etiam le microscopio electronic non es infinitemente meliorabile in su potentia separatori, proque le longor de unda associate con le electron—ben que micrissime—non es infinitemente micre. Nunc le reporto veni de Paris que un microscopio ultralectronic ha esseva construite per scientistas del francese Centro National de Recercas. Illes ha utilisate ni lumine ni electrones sed protones. Le longor de unda associate con le proton es si micre que le potentia separatori del microscopio protonic es sex vices superior a illo del microscopio electronic.

Agronomia.—Scienistas del statounitese Departimento de Agricultura ha initiate recercas relative a un completemente nove methodologia in le applicatione de pesticidas. Le base de iste methodologia esseva un facto observate in recercas que ha nihil a facer con pesticidas sed es concernite con le regulation—acceleration e relentation—del crescentia. Le facto in question es que certe agentes que affice le crescentia de plantas ha le capacitate de migrar inalterate in le circulation de illos a transverso omne lor organos usque illos es exsudate per le radices e certe altere structuras. On ha constatare que iste phenomeno non es restringite a regulatores de crescentia sed que illo occorre con varie substantias chimic que exerce nulle influentia del toto super le plantas in le quales illos circula. Le problema es nunc "simplemente" trovar un pesticida que circula in le planta sin afficer lo e que es exsudate per le radices e le altere structuras contra le quales le varie pestes dirige lor attacco.

Statistica Demographic.—Super le base de recentemente publicate datos del censo sovietic de 1959 on estima que sin le secunde guerra mundial—i.e. sin su perditas directe e su perditas indirecte in cifras de natalitate—le population de Russia esseva hodie circa 40 millones supra su nivello effective de 210 millions. Le censo revela que le feminas in Russia es 20 millones plus numerose que le homines. Omne 55 feminas corresponde a 45 homines. Usque nunc on ha credite que le perditas russe in le secunde guerra mundial amontava a circa 7 millions. Iste cifra es phantasticamente alte, sed le nove datos impone le conclusion que illo es incorrecte: le ver perditas esseva plus probabilmente duo o tres vices 7 millions.

Dentisteria.—Dr. Robert S. Harris del Instituto Technologic de Massachusetts ha constatare que hamsters nutrite con mais e lacte veniente de Texas disveloppava 40% minus carie dental que hamsters nutrite con mais e lacte cultivate in Nove Anglaterra. Un longe serie de experimentos biochimic ha ducite Dr. Harris al conclusion final que le agente anti carie in le alimento de Texas esseva un phosphoro. Essays interprendite in Sveda con 2000 juveniles human ha confirmate le conclusions experimental de Dr. Harris. Le incidentia de carie esseva reducite per 50% in le juveniles tractate con phosphoro.

Statistica Vital.—Studios statistic de Dr. E. Ask-Umark de Uppsala monstra que le longevitate de professores in Sveda (68 annos) es superior a illo de conductores de tramways (61 annos). Inter 382 professores, 151 moriva de morbos cardiovascular, 53 de morbos cerebro-vascular, 53 de tumores maligne, e 34 de morbos respiratori. Tuberculosis, cancre pulmonar, e suicidio esseva rar como causa de morte in iste gruppero de professores.

GENERAL SCIENCE Reading Interlingua

YOU CAN READ Interlingua if you had no more than one semester of high school French or Spanish or Latin and flunked it. You can read and understand a great deal of it even if you had never had contact with any foreign language.

Send this page to an acquaintance abroad and tell him that he can get additional information about Interlingua from DR. ALEXANDER GODE, SCIENCE SERVICE's Interlingua Division, 80 E. 11th St., New York 3, N. Y.

Financial contributions to the Interlingua program are needed.

SCIENCE NEWS LETTER

VOL. 76 JULY 25, 1959 NO. 4

Edited by WATSON DAVIS

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N St., N.W., Washington 6, D. C., NOrth 7-2255. Cable Address: SCIENSERV.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; ten or more copies in one package to one address, 7½ cents per copy per week; single copy, 15 cents, more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright © 1959 by Science Service, Inc. Reproduction of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicated services issued by Science Service. Science Service also publishes CHEMISTRY (eight times a year) and THINGS of Science (monthly).

Printed in U.S.A. Second class postage paid at Washington, D. C. Established in mimeograph form March 13, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Reader's Guide to Periodical Literature, Abridged Guide, and the Engineering Index. Member Audit Bureau of Circulation.

SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees—Nominated by the American Association for the Advancement of Science: William W. Rubey, U. S. Geological Survey; Wallace R. Brode, National Bureau of Standards; Douglas Whitaker, Rockefeller Institute for Medical Research. Nominated by the National Academy of Sciences: Harlow Shapley, Harvard College Observatory; Philip Bard, Johns Hopkins University; Henry Allen Moe, John Simon Guggenheim Memorial Foundation. Nominated by the National Research Council: Leonard Carmichael, Smithsonian Institution; John R. Dunning, Columbia University; Benjamin H. Willier, Johns Hopkins University. Nominated by the Journalistic Profession: Michael J. Ogden, Providence Journal-Bulletin; O. W. Riegel, Washington and Lee University; Lee Hills, Detroit Free Press. Nominated by the Scripps Estate: Edward J. Meeman, Memphis Press-Scimitar; Frank Ford, Washington, D. C.; Charles E. Scripps, Cincinnati, Ohio.

Officers—President: Leonard Carmichael; Vice President and Chairman of Executive Committee: Charles E. Scripps; Treasurer: Wallace R. Brode; Secretary: Watson Davis.

Staff—Director: Watson Davis. Writers: Helen Buechi, Ann Ewing, Richard Litell, Allen Long, Jane Marye, Elisabeth Mitchell, Ralph Segman, Howard Simons, Benita Tall, Marjorie Van de Water. Science Youth Division: Joseph H. Kraus, Dorothy Schriver, Shirley Moore. Photography: Fremont Davis. Production: Priscilla Howe, Marcia Nelson. Syndicate Sales: Hallie Jenkins. Interlingua Division in New York: Alexander Gode, 80 E. 11th St., GRamercy 3-5410. Advertising Manager: Fred A. Moulton, METropolitan 8-2562.
