# BITS MICROCOMPUTER BOOKS

*This is an enlargement of what is probably the most important tool in mankind's near future, the microprocessor.*

*In microcomputers and other "smart" devices, it is already seen as the basis of a "second industrial revolution"!*

Learn about it from BITS' microcomputer books!

FULL  
COLOR  
POSTER

Here is the  $\frac{1}{4}$ " Z-80 microprocessor chip blown up to poster size (18" X 19 1/2") and in full color. Shipped in a tube, postage for one is \$ .75, two or more \$ 1.40

#640 \$3.50

## RUNNING WILD THE NEXT INDUSTRIAL REVOLUTION

by Adam Osborne

Many of the uses to which computers are being put today could cause profound problems tomorrow. In industry, government, medicine and commerce, the full effects of computer technology — the next industrial revolution — have not yet been realized. Dr. Adam Osborne, a well-known writer and consultant in the world of microelectronics, has written this book to confront the reader with what is going on today, and what will certainly be happening tomorrow.

#223 \$3.95

## HOW TO MAKE MONEY WITH YOUR MICROCOMPUTER

by Carl Townsend and Merl Miller

This is a guide to the various ways that you can create income in the microcomputer age. All aspects are covered, including magazine articles, books, service bureaus, repair, software, hardware, consulting, retailing and shows. It will provide guidance in establishing and managing your business and in marketing your product. Your investment in your microcomputer and/or programming can return a dividend. 154pp.

#257 \$8.95

## PIMS Personal Information Management System

by Madan Gupta

This book describes a data base management program designed for personal use on small computer systems using BASIC. Along with complete source listings of the program and comprehensive operating instructions, the book discusses the microcomputer and its potential for personal use. Additionally, 15 comprehensive applications of the program are illustrated in detail. 88pp.

#201 \$9.95

## MATHEMATICAL ELEMENTS FOR COMPUTER GRAPHICS

by David F. Rogers and J. Alan Adams

This book introduces computer graphics technology and the math used in computer processing of graphics. The main concentration is on the matrix algebra used to transform (rotation, scaling, reflection, translation, projection, etc.) images represented by computer. Also covered are plane and space curve representation, and surface description and generation. The appendices include background material on matrix operations and over 30 programs in extended BASIC for processing computer graphics. If graphics is your application, this is the place to start. 239pp.

#135 \$12.95

## An Important New Book

### GODEL, ESCHER, BACH: AN ETERNAL GOLDEN BRAID

by Douglas R. Hofstadter

Culling underlying themes from several different disciplines is an artful and enlightening talent. Douglas Hofstadter has accomplished this, and in doing so has made very abstract mathematical ideas clear to the general reader. Self-reference and interplay between levels are found in Bach's music, Escher's drawings, and then presented in Godel's Theorem. Hofstadter follows these ideas down a long trail which includes mathematics, physics, computers, the genetic chemistry of DNA, Zen Buddhism, and artificial intelligence, among others. Each step of the way is illuminated with the dialogues of characters taken from the history of mathematics. The book is a rare gem. 777pp.

Hardcover #256 \$20.00

## BASIC BASIC, 2nd EDITION

by James S. Coan

**Basic BASIC** gives you step-by-step instructions for using a terminal, writing programs, using loops and lists, solving mathematical problems, understanding matrices and more. The book contains a wealth of illustrations and example programs, and is suitable for beginners on many different levels. It makes a fine reference for the experienced programmer, too. 256pp.

#014 \$9.45

## ADVANCED BASIC

by James S. Coan

#003 \$9.65

## PROGRAMMING IN PASCAL

by Peter Gorgono

This book is an excellent introduction to one of the fastest growing programming languages today. The text is arranged as a tutorial containing both examples and exercises to increase reader proficiency in PASCAL. Besides sections on procedures and files, there is a chapter on dynamic data structures such as trees and linked lists. These concepts are put to use in an example bus service simulation. 359pp.

#099 \$11.50

## SCIENTIFIC AND ENGINEERING PROBLEM SOLVING WITH THE COMPUTER

by William Ralph Bennett

Besides teaching BASIC (which it does admirably), this lively, lucid book presents a wealth of imaginative and illustrative applications programs and simulations taken from many disciplines. The exercises run the gamut from matrix algebra to cryptography, from rocket travel to lasers. You'll discover BASIC applications in math, graphics, physics, engineering, communication and language. 457pp.

# Speak German like a Diplomat!

What sort of people need to learn a foreign language as quickly and effectively as possible? Foreign Service personnel, that's who. Members of America's diplomatic corps are assigned to U.S. embassies abroad, where they must be able to converse fluently in every situation.

Now, you can learn to speak German just like these diplomatic personnel do—with the Foreign Service Institute's Programmed Introduction to German.

The U.S. Department of State has spent tens of thousands of dollars developing this course. It's by far the most effective way to learn German immediately.

The Programmed German Course consists of a series of tape cassettes and an accompanying textbook. You simply follow the spoken and written instructions, listening and repeating. The course begins entirely in English. But by its end, you'll find yourself learning and speaking entirely in German!

This course turns your cassette player into a "teaching machine." With its unique "programmed" learning method, you set your own pace—testing yourself, correcting errors, reinforcing accurate responses.

The FSI's Programmed German Course comes in two volumes. You may order one or both courses:

- Volume I, Basic.  
9 cassettes, 13 hours and a 647-page text, \$115
- Volume II, Advanced.  
8 cassettes, 8½ hours and a 333-page text, \$98.  
(New York State residents add appropriate sales tax.)

Your cassettes are shipped to you in hand-some library binders.

**TO ORDER, JUST CLIP THIS AD and mail with your name and address, and a check or money order.** Or, charge to your credit card (American Express, VISA, Master Charge, Diners Club) by enclosing card number, expiration date, and your signature.

**The Foreign Service Institute's German course is unconditionally guaranteed.** Try it for three weeks. If you're not convinced it's the fastest, easiest, most painless way to learn German, return it and we'll refund every penny you paid! Order today!
